FINCH ARTIST

"A WORK OF F-ART"

BY ELLENA, SAMANTHA, AND JOHN

INTRODUCTION

Using the Finch robot 2.0, we have built an interactive creative interface where a user may draw an abstract design using shapes and lines to create their work of f-art! This is intended for those who cannot grip a drawing utensil or those who want to partake in a unique art experience. Through the Finch, the user can create something wonderful with the press of a button.

JUSTIFICATION

Our project is unique because it combines the arts and sciences. It can draw a variety of shapes (circle, triangle, wavy line, and line) and move in many ways on command. It also lets you know when your shape is done being drawn through a series of notes from the speaker. We use three sensors in our app: the temperature sensor, the obstacle (infrared) sensor, and the A and B buttons. While drawing, the Finch will encourage you through happy faces on the micro:bit since positive reinforcement is good for the soul. Plus, as mentioned before, the creators of this (us) will give feedback on the art when the artist is done through the micro:bit display. We use the LEDs of the Finch with the obstacle sensor and the temperature sensor. Finally, we tried our best to follow Agile processes and GitHub flow strategies.

USAGE & DEMONSTRATION

The Finch robot can draw whatever your heart desires. The user will press the buttons of the application to tell the Finch what to draw, how to move, to tell the temperature, or give feedback. The Finch will show off its LED, micro:bit, speaker, and sensors usage. The art is done through the insertion of a drawing utensil through the hole on the top. The next slide will show how our frontend was supposed to look like. After, we will demonstrate our final project.

Finch Artist

"A work of f-art!"

Press blue buttons below to make the Finch draw shapes, read the temp. of the room, move in different directions, or give feedback on your art!

Circle

Triangle

Line

Wave

Press A or B button on Finch as you press DONE! button to get feedback.

Temperature

DONE!
